**Crop Smart**

SMART ZINC SULPHATE is suitable for the following crops where a Zinc deficiency occurs. Apply with sufficient water for thorough coverage of leaves. Minimum water/hectare 75 litre.

### **CAUTION**

The following conditions must be observed in order to apply blends successfully. Failure to follow these instructions may result in damage to the plant.

- Use Smart Zinc product under conditions of optimum plant growth including highest humidity, moderate temperatures and adequate soil moisture. Early morning or late afternoon spraying is most effective as evaporation can occur during hotter parts of the day. When mixing with other chemicals, always mix a small quantity (e.g. bucket test) and check for precipitate (fall out) in mixture. If precipitation occurs, do not proceed further.
- Add wettable or soluble powders, emulsifiables or flowables to water in the mix and wet, dissolve or disperse before adding Smart Zinc.
- Use the correct label spray rates of any pesticide used with Smart Zinc.
- **DO NOT** use when crop is under heavy stress from pests, heat or inadequate moisture levels.
- **DO NOT** apply by aircraft if surface wind is greater than 8 kph to assure adequate crop coverage and droplet deposition.
- **DO NOT** spray to run off. **Do not** spray to visible droplet coalescence. **Do not** allow concentrated spray mist to run on fruit or leaves.
- **DO NOT** apply during the heat of the day.

**NOTE:** We recommend that when applying to a crop or area for the first time, or in combination with other chemicals, a small test area should be sprayed and observed prior to total crop spray. **Safety glasses, gloves and protective clothing should be worn when using this product.**

### **STORAGE & DISPOSAL:**

Do not contaminate water, food or feed by storage or disposal. Triple rinse container, empty rinsate into spray tank. Dispose of the empty container according to approved local practices, contact primary industries for disposal information.
